An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Please replace the abstract as filed with the attached abstract on a separate sheet.

At page 2 of the specification, immediately before paragraph [0001], please insert:--This application is a 371 of PCT/FR03/03446, filed 21 November 2003.--.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or suggest even minimally improved results in the form of better performance as compared to bitumen alone without an high temperature elastic behavior penalty introduced with the use of unfunctionalized silica. There is no apparent chemical reason taught or suggested by the prior art that use of a functionalized amorphous silica would operate to preserve elastic behavior of the bitumen. In view of the specification and immediately obvious intent thereof the use of the non-standard "silicon" nomenclature describing the preferred silane coupling agents is accepted as falling within applicant's right to be his own lexicographer. Such coupling agent are recognized in the relevant art as being materially different in structure and operation from silicone hydrophobizing agents.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David M. Brunsman whose telephone number is 571-272-1365. The examiner can normally be reached on M, Th, F, Sa; 7:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo can be reached on 571-272-1362. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

**ABSTRACT**

The invention concerns method for enhancing the physico-chemical properties of bitumen compositions and novel bitumen compositions with enhanced properties and their uses by mixing a functionalized amorphous silica made by combining amorphous silica with a coupling agent.
